Work Experience

Senior Frontend Engineer, MonieWorld — London, UK

Jun 2024 - Aug 2025

- Developed a money transfer app in React, Next.js, and Tailwind for international remittances from the UK, processing more than £100K within the launch month.
- Added support for Apple Pay and Google Pay to the money transfer system which ended up increasing payment success rate by 55% due to more convenient transfers.
- Led the initial development of the app as the founding engineer, building the architecture from the ground up which ended up as the basis of everything else.
- Conducted thorough unit testing of the application using Jest and e2e testing using Playwright by setting up a proper test environment, reducing reported bugs by 90%.

Senior Frontend Engineer, Louise — Paris, FR

Mar 2024 - Present

- Developed an admin dashboard in React and Next.js that allowed OB/GYN doctors to manage their patients, including insights, billing, and treatments.
- Built an accessible design system in Tailwind and Storybook that reflected the brand's identity, including components such as MultiSelect and Autocomplete.
- Added multilingual capabilities to the app (i18n), making French speakers feel right at home, which made it easier for doctors from both France and the US to onboard.

Lead Frontend Engineer, Archer Affiliates — NYC, NY

Jan 2024 - Jan 2025

- Led the complete redesign of an outdated Amazon affiliates platform in Next.js and Material UI that boosted its sales by 50% due to an improved UI and a consistent UX.
- Developed a ticketing service and integrated it into contact, help, and support forms which allowed the admins to review tickets from an admin panel and respond.
- Built a chrome extension using Plasmo that shared the UI and business logic through a shared NPM package, resulting in the exact same UX between both platforms.
- Created a paid promotions feature in React with Stripe that allowed the users to request promotions from other users using a fully-fledged request management system.

Senior Frontend Engineer, Tenttwenty — Dubai, UAE

Jun 2023 - Jan 2024

- Developed content-driven websites in React and Next.js, backed by CMSs such as Strapi, combined with functional animations using GSAP and SCSS.
- Synced with the clients every single day, taught them how to use the CMS, answered their queries, and led multiple websites to success.

Frontend Engineer, TheTutor — Dubai, UAE

Jun 2022 - Jun 2023

- Developed a multi-tenant app in React and Redux that allowed teachers in the UAE to create and sell courses across the world from a clean admin panel.
- Added a marketplace for teachers to sell their courses at and for parents to buy courses from.
- Created a course creator tool that teachers could use to create courses using drag and drop elements.
- Created a meeting tool that allowed teachers to conduct online sessions with their students.
- Built a design system in Bootstrap and Storybook as an NPM package for the tools to share.
